About Us

Unique Network Systems is a **New York City** - based Information Technology Service and Consulting Company established in the **1990s**
. As a service provider, we are fully available to both small and medium size organizations. Through the years we have provided assistance to clients throughout **New York City**, the **Bronx, Long Island** as well as areas of **Westchester County** like **Port Chester, Yonkers, Mount Cisco, Pleasantville**, and others.

We provide our clients with reliable and affordable service .

We make sure that our clients get our undivided attention through our services, which leaves then to concentrate on the day to day running of your business
. We use our knowledge, training, and skills to make it happen.

After spending **6 years** in the **Forest Hills, Queens Location, and 8 years in Elmont, Long Island as well as Port Chester, New York; we finally moved our office and currently are located in the Manhattan North Harlem Area.**
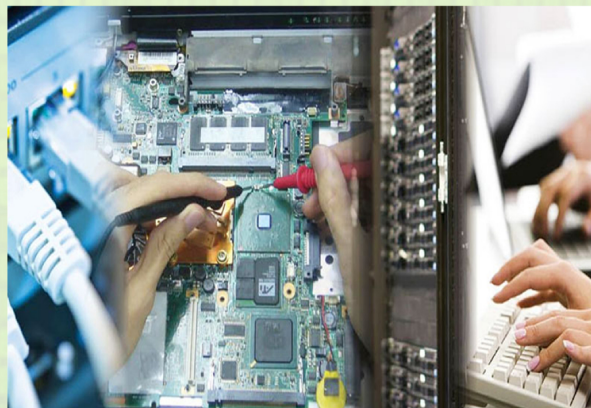

Our Services

We offer our clients variety of service choices:

- **Call to Call** *(designed for companies that do not required constant system watch. so we get called when we needed bases on hourly rate including travel time)*

- **Remote Assistance and Support**
(Design for the clients that required continues system watch usual all issue resolved remotely unless problem that requires onsite visit usually part of the maintenance agreement if not charged hourly rate)

- **Phone Assistance and Support**
(Offered to a clients on as needed and also usually part of a maintenance agreement if not charged hourly rate)

- **Maintenance & Contract/Agreement**
(General contract which is based on type of equipment and amount of Servers and Nodes with in network infrastructure)

IF YOUR SYSTEM IS NOT WHAT IT SHOULD BE LET US RESTORE IT BACK TO HEALTH
DO YOU KNOW?

How costly loss of data is. Backup and recovery is a protection that your organization should consider as a general practice.

In general, backup and recovery refers to the various strategies and procedures involved in protecting your database against data loss and reconstructing the database after any kind of data loss.
A backup is a copy of data from your database that can be used to reconstruct that data. Backups can be divided into physical backups and logical backups.

-We have a program that will provide "CLOUD" nightly backup of your server
